

How to Link Excel Data to Graphs

The Auto-Linked Chart is a diagram designed to help you easily create and edit charts or graphs linked to Excel. When you enter or modify data in the embedded Excel sheet within PowerPoint, the chart automatically updates to reflect the new values. This allows you to work on your presentation quickly and efficiently

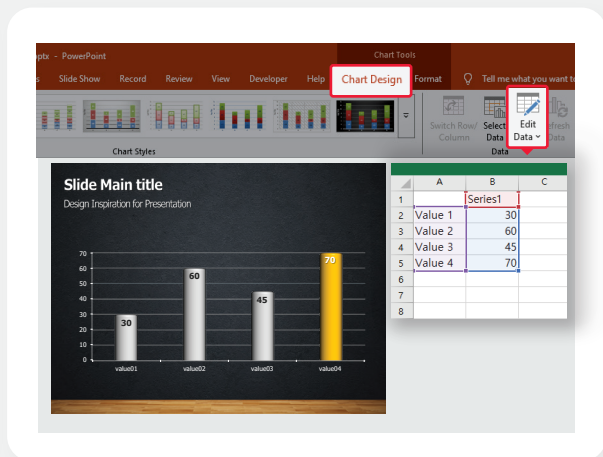

Create professional charts and graphs easily with GoodPello!

Steps for Linking Excel Data

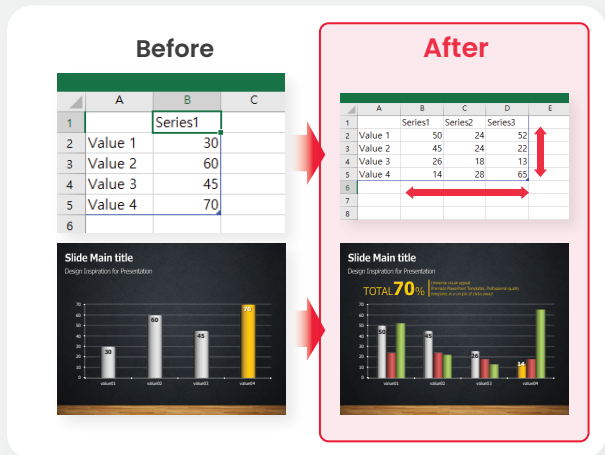

1 Open the File

Open the template file you downloaded from GoodPello.

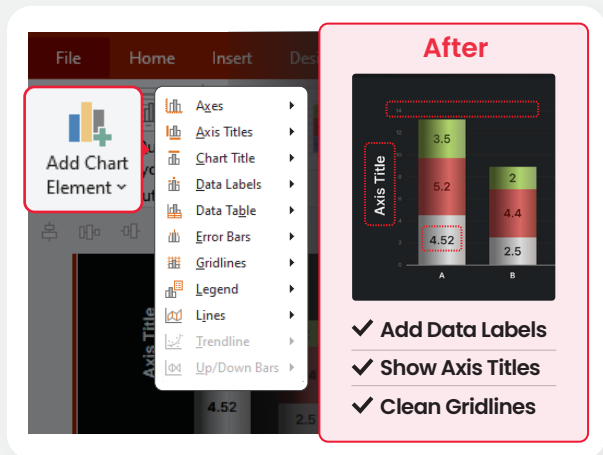

2 Open the Excel Sheet

Select the chart, then go to the **[Chart Tools - Design]** tab and click **[Edit Data]** to open the linked Excel sheet. You can edit the data directly in this sheet.

3 Edit Data Values and Check Results

Change the numerical data in the Excel sheet—the updated values will automatically appear in the chart. After editing, check your slide to confirm that the chart reflects the new data. To add more categories or series, drag the blue box in the Excel sheet to expand rows or columns, then enter your new values.

4 Adjust Chart Style and Display Format

Enhance the readability of your chart by adjusting its style and format. Use **[Add Chart Element]** to display data labels, axis titles, or legends, or open the **[Format]** tab to edit font size, color, and gridline style. A few small tweaks can make your chart look more polished and professional.

5 Change Graph Colors

To change the color of a graph, select only the part you want to edit. Then go to **[Format] -> [Shape Fill]** and choose your desired color. The chart will immediately display the updated color scheme.
